

Compressed air is used in almost every Yacht, for general service purposes, as starting energy for engines or for primary energy for air horns. There seems to be an unlimited supply, but in reality it is expensive to produce, it can be quite noisy and if fails may lead to a major accident.

Compliment with class regulations, correct installation and regular maintenance will help to **avoid failures, extra costs and discomfort** on board

Does your compressor offer the necessary quality in terms of pressure and volume flow? The receiver plays a significant role in ensuring supply security. When was the last pressure test done? Does your installation have the necessary drains, filters and dryers to comply ISO 8573-1, compressed air quality required for your application? Small leaks can make up a large part of the costs for compressed air, leakage rates of 30 % are not a rarity. Does your compressor start too many times in relation with your consumption? When was the last leakage test done?

We at Astilleros de Mallorca are experts in compressed air installations, certified and regular compressors supply and selection of associated components. Contact us for you next class inspection, we will take care of the compulsory checks and overhauls according regulations. Receivers will be tested by us, and if new units are needed we are even able to custom made one unit to solve space problems. Alarms and safeguards will be tested to ensure reliable operation. With our Leak Detector we will provide an exact report of leaks in your system.

Brands as ATLAS COPCO, COMPAIR, KAESSER or HATLAPA are regularly maintained at our installations. Leave your installation in our expert hands!
